

Learning outcome: L1 – 10 marks

### Design Interface

- **(3 marks)** Please implement a PIZZA ORDERING Android application. The UI should include the elements given in the sketch below. Fill free to improve the design of this interface as bellow; add a listview to store all the bill for your company.

### Functionality:

- **2 marks** : After completing the selection the user pushes the 'Place Order' button to send a summary of the order. At a future time we will deliver a text-message to the vendor. At this point simply display the text summarizing the order using the Toast method.
- 2 marks. Add the bill to the listview.
- 2 mark: click into listview, display the bill that belong the line display upto the screen.
- **Caution:**
  1. **1 marks:** Make sure customer name and phone are provided
  2. **1 marks:** Default pizza shape to 'Round Pizza'; Make sure at least one topping is chosen

Test your application in the Emulator.

- bài cuối kỳ: thêm listView/recycleview
- có thể có thêm Spinner
- thay thế nút lệnh bằng menu
- tạo và lưu trữ thông tin với SQLite (create, insert, delete, update)
